

Lab Assignment 2

T-213-VEFF, Vefforritun, 2018-1

CSS

Your task is to take the HTML file named Book.html and create a CSS file that changes the way it looks so it will look like the screenshot in Book.png.

In this exercise, you only need to consider one browser - preferably Firefox or Chrome, but IE and Opera are allowed as well.

You are not allowed to change the HTML file, except the following:

- You should link your CSS file to the HTML file.
- You may add class and id attributes to any HTML elements, but it is not necessary. However, if you choose to do so, try to keep it to a minimum.
- You may add additional <div> and elements. Again, this is not necessary and try to minimize this as much as you can, use the descendant selector instead if possible.

Here are a couple of points you should consider:

- For styling of the table, you might want to consult these pages:
 - <https://colorlib.com/wp/css3-table-templates/>
 - <http://www.smashingmagazine.com/2008/08/13/top-10-css-table-designs/>
- To figure out the font used, check out this page:
 - http://www.upsdell.com/BrowserNews/res_fonts.htm
- To ensure an element is centered, you should not use the <center> tag, instead set the margin-left and margin-right to "auto"

Hand in

The deadline for this assignment is January 30th at 23:59. Hand-in both the CSS file and the HTML file, as well as any image file needed (**only .png files**) in a single zip/rar file.

As you hand-in your assignment, make sure to leave a comment stating which browser you used.

The grading will be similar as in the first lab assignment: 10 for a perfect or next-to-perfect solution, 8 if there are only minor issues, 6 if there are some issues, etc.
